Dear Nigar Fatima,

I would like to assign you a **new project requirement** for evaluation & implementation.

Project Overview - HRMS Portal :

We are planning to design and implement an **HRMS (Human Resource Management System) Portal** for our **internal use**, aimed at effectively managing & tracking internal employees and staff.

The portal is expected to cover all **primary and basic HRMS modules**, including (but not limited to):

- Employee management
- Role and access control
- Attendance and leave tracking
- Basic HR workflows and records
- Required integrations for internal operations

Development Approach :

You are free to choose the approach that you find most suitable:

Option 1: Open-Source HRMS

You may evaluate and use any **secure and reliable open-source HRMS solution** available globally. This approach is recommended as it can significantly reduce development time & effort.

Option 2: Custom Development from Scratch

If you are more comfortable building the HRMS from scratch & feel it would better suit our requirements, you may proceed with a custom development approach as well.

The choice of approach is **completely up to you**, based on your assessment, comfort level & feasibility.

Next Steps :

Please review this requirement and **share your preferred approach at the earliest**, so that we can:

- Finalize the technical direction
- Define development timelines
- Plan the next execution steps accordingly.

In case you need any clarification or additional inputs while evaluating this requirement, feel free to reach out to me.

Looking forward to your proposal & approach on this.
